

BIO TRAK™

- 100% Bio-Degradable
- Environmentally Friendly

Application guide and installation instructions: www.fabritrak.com/biotrak

Stretching Sustainability

Fabri Trak Systems is committed to the goal of making real and practical contributions toward sustaining our precious environment. Toward this end Fabri Trak Systems has developed and implemented two important programs:

The manufacture and supply of a bio-degradable track system, Bio Trak™ and a reclamation, recycling and remanufacturing program of the discarded FabriTrak®.

What is Bio Trak™ ?

Bio Trak™ is Fabri Trak® with a unique additive that serves to enable bio-degradation to take place in modern landfill conditions. Bio Trak™ when combined with a natural, sustainable infill material, such as TerraCore™ natural cotton, and a recycled fabric covering, contributes to the continuing sustainability of our planet's natural resources. Bio Trak™ is the natural choice for sustainable wall and ceiling treatments.

Bio Trak™ is presently available in all thicknesses between 3/8" and 2"
